

PS Energy Group to Help Airports Go Green and Save Green

etrac™, a division of PS Energy Group, Inc., has added CI² Aviation, Inc. to its growing list of channel partners to share the eco-benefits and cost savings of remote tank monitoring with North America's airports.

CI² Aviation, a leading aviation management and technology solutions provider specializing in air traffic control, will now offer PS Energy Group's etrac-TM™ (Tank Monitoring) solution to help North America's airports protect the environment and save money.

"We're working with CI² Aviation to expand PS Energy Group's wireless and green product line to help airports monitor their worldwide aviation fuels and other liquid inventories from anywhere with a few simple keystrokes," said Livia Whisenhunt, president, CEO and founder of PS Energy Group.

etrac-TM™ eliminates the need to physically check tank levels and can help detect leaks as well as reduce the environmental impact of operations. Customers can detect real-time changes in their storage tanks from their cell phones or computers.

"CI² Aviation can help airport facilities increase productivity and reduce emissions because PS Energy Group's etrac-TM™ allows you to instantaneously determine fluid levels without driving to each site to check storage tanks," said Andrella Kenner, president of CI² Aviation.

About PS Energy Group, Inc.

PS Energy Group, Inc. (www.psenenergy.com) is a privately-owned company that offers a full range of energy and transportation products and services. The [fuel management program](#) provides access to more than 200,000 fueling stations across the United States, including alternative fuels, in addition to customer-owned sites.
